

Clinical decision-making is a complex process.

Any single patient management decision will be affected by a number of factors. How can you help your team make consistent, guideline-based choices?

Action Sets from the BMJ Evidence Centre are care protocols that provide structured lists of actions and orderable items to help clinicians diagnose, treat and manage patients. They support clinical decision making and ensure that care is delivered consistently by placing evidence-based, peer-reviewed guidance right into the clinical workflow.

Our team of clinicians translates guidelines into patient management pathways that support diagnosis, treatment and management of the most common conditions. Our suggested tests and interventions are backed up by rigorously assessed evidence, where this exists, and expert opinion where evidence is lacking. Action Sets can be localised to ensure that the guidance they provide is precisely appropriate to your hospital or the way you practise.

Following an authoritative, standardised care pathway can reduce medical errors and drive down clinical costs. Talk to us today about helping ensure your hospital is a safer place - email consortiasales@bmjgroup.com or call +44 (0)20 7383 6693.

CARE PROTOCOLS
FROM THE BMJ EVIDENCE CENTRE

Features

- peer-reviewed by local experts and based on high-quality evidence sources
- premium packages include web access to *Clinical Evidence* and *Best Practice*
- continuous evidence surveillance with rolling annual updates
- links to graded evidence and supporting guidance
- links to and compliance with national guidelines
- integrated drug formulary
- web-hosted with administration tools for storing and managing localised orders
- implementation support and ongoing evidence consultancy.

Benefits

- currency of evidence and advice improves patient outcomes
- shortened length of stay and time saved on creating own order sets reduces costs
- authoritative, practical guidance reduces mistakes and increases patient safety
- automated and standardised care simplifies clinical workflow and introduces operational efficiencies
- web hosting saves costs of local software licensing and server management
- more than 1000 hospitals worldwide trust the BMJ Group for authoritative evidence-based tools and services.

Comprehensive decision support package

• EVIDENCE SUMMARIES

Our unique evidence summaries isolate the precise piece of evidence that supports the guidance given in the order item. They incorporate GRADE statements, essential information about the condition, differential diagnoses, step by step treatment guidance, follow-up recommendations and patient leaflets.

• BEST PRACTICE

Licensees can opt to upgrade their order entry sets to include full web access to our *Best Practice* point-of-care tool that provides comprehensive evidence, expert opinion and guidance relating to 10,000 diagnoses, including full reference links and colour images.

• CLINICAL EVIDENCE

Web access to the gold-standard of evidence-based medicine can also be packaged with your Action Sets. *Clinical Evidence* provides systematic reviews of over 3300 interventions in the context of over 670 clinical situations.

Ask us about options for integrating our Action Sets with other systems or paper-based formats.
