

EndNote: Installing Additional Styles

By default, **EndNote versions X3** and later will only install the most commonly used output styles. To change this, you have a couple of options. You can add styles individually by downloading from our website and installing them, or you can add all styles or specific categories of styles by modifying your installation.

Downloading and Installing Individual Styles

Individual styles can be downloaded from our [website](#). **Note:** Styles created for EndNote 8 and later are not compatible with EndNote 7 and prior. We apologize for the inconvenience

Use the [Style Finder](#) to search for the full name of the style or publication. Once you've located the style you're looking for, save it to your desktop or other easy to find location. Then, follow the instructions that are appropriate for your version of EndNote as listed below.

Installing the style into **EndNote X2 and later:**

1. In Windows, or using your Macintosh Finder, browse to the location where you downloaded the style. Double-click on the style file to open it. It should open in the EndNote program.
2. In EndNote, go to the "File Menu" and choose "Save as."
3. Remove the word "copy" from the end of your style's name, and then click the Save button.
4. Click on the "File Menu" and choose "Close Style."

Installing the style into **EndNote 8, 9, X, or X1:**

1. Using Windows, or using your Macintosh Finder, browse to the location where you downloaded the style. Right-click on the style file and select Copy.
2. Browse to your Endnote Styles folder. This will typically be in following location:
Windows: C:\Program Files\EndNote #\Styles (Where # is the version number for EndNote)
Mac OS: Applications\EndNote #\Styles (Where # is the version number for EndNote)
Note: If you modify the EndNote preferences, you can set this to another location. To check this setting, go to the "Edit" menu or EndNote menu on the Mac and select "Preferences." Click on the Folder Locations option to see the custom Style folder location and modify as needed. Keep in mind that the default location for the Styles folder may cause problems when trying to save or edit in Windows Vista and 7 with versions prior to EndNote X2. Please see [this article](#) for more information on this issue.
3. Right-click in this folder and choose Paste. Your style should now be installed in the EndNote program.

Installing All Styles or Styles by Category

EndNote X3 and later have the ability to modify the installation to include additional content files. While this article focuses on styles, it is of note that similar steps can be used to add [filters](#) and [connections](#) as well.

On **Mac OS:**

1. Start EndNote to go to the "EndNote" menu and choose "Customizer."
2. To install ALL styles, place a check next to "Output Styles." Alternately, you can expand the Styles drop down and check only the disciplines that are of interest to you.
3. Click Next twice until the changes are complete. Click Done to close the window.

On **Windows:**

1. With **Windows XP**, go to Control Panel, Add or Remove Programs. Select EndNote and Choose Change. Select the Modify Option and choose Next.
With **Windows Vista/7:** Go to Control Panel, Programs and Features. Select EndNote and Choose Change. Select the Modify Option and choose Next.
2. To install all styles, select the box in front of "Additional Styles" and choose "Will be installed on local hard drive." Alternately, you can choose styles of specific disciplines to install. Click the plus mark to the left of "Additional Styles" and select the box in front of the appropriate discipline(s). Choose "Will be installed on local hard drive," then click Next until the process is complete.
